# Eduardo Hernacki

Software Engineer & Technical Leader

Munich, Germany | +49 174 9194077
services@runlevel0.me | linkedin.com/in/eduardohki | runlevel0.me

## Executive Summary

Software Engineer and Technical Leader with 10+ years in software and cloud and over a decade in regulated industries, working hands-on from inside teams: from software architecture and code (TypeScript, Python, Rust, Elixir) to how cloud-native systems on AWS are tested, deployed and operated, and from clear requirements to reliable delivery of software products.

Currently focused on AI-augmented software engineering and AI agent engineering in the financial services industry: building developer tooling with Claude Code and helping engineering teams adopt it. Anthropic-certified Claude Architect, and an organizer of Munich's BEAM and functional programming meetups.

## Technical Skills

**AI & Agent Engineering**: Claude Code (agents, skills, subagents, plugins, MCP), Claude Agent SDK, Claude API, Strands Agents, Amazon Bedrock AgentCore, agentic automation, AI-assisted software development, Spec-Driven Development, AI adoption enablement
**Software Architecture & Development**: Elixir, Gleam, Rust, TypeScript, Node.js, Python, SQL, Bash, HTML, CSS, DDD, TDD, BDD, Functional Programming
**Cloud & Platform Engineering**: AWS (CDK, CloudFormation, API Gateway, S3, DynamoDB, Lambda, Step Functions, EventBridge, Kinesis, RDS, Aurora, IAM, EC2, ELB, EFS, EKS, ECS, Fargate, CloudFront, Route 53, Secrets Manager, Backup, Organizations, Landing Zone and more), Serverless, Kubernetes, Terraform, Helm, Pulumi, Docker
**Scalable Software Systems**: event-driven architectures, serverless, compliance-ready systems, observability, software supply-chain security, resilient and secure design
**Ecosystems & Tools**: Git, GitHub, GitHub Actions, GitLab, CI/CD, Azure DevOps, Jira, Confluence, Linear, Elastic Stack, Datadog, New Relic, Prometheus, Grafana, Trivy, Dependency-Track, OpenAPI, OAuth
**Methodologies**: Domain-Driven Design (DDD), Spec-Driven Development, Behavior-Driven Development (BDD), Requirements Engineering, Trunk-Based Development, Continuous Delivery, Team Topologies, Scrum, Kanban

## Experience

**Lead AI Engineer** Apr 2026 – Present
*SQUER | For a Financial Services Client* *Munich, Germany*

- **AI Adoption & Enablement**: As one of the client's AI Champions, grew the use of AI coding agents (Claude Code) from zero to dozens of active developers across three engineering groups, splitting my time between building the tooling and enabling the teams using it, and shaped new ways of working across the business area.
- **Spec-Driven Development**: Designed and built, in TypeScript and Python on Claude Code and the Claude Agent SDK, a Spec-Driven Development pipeline that turns rough notes, business context and people's input into reviewable Given/When/Then specifications, Jira stories and a code branch per feature, then into code changes through separate implementation and verification stages, with bounded self-correction and autonomous runs.
- **Requirements Engineering**: Wrote the requirements-authoring skill for the shared AI tooling, covering user stories, BDD acceptance criteria, story slicing and backlog review, designed to teach the craft to product owners, analysts and developers rather than write requirements for them; it became the reference example for skill design.
- **Agent Runtime**: Drove the move of these pipelines' AI agents to a managed cloud runtime (Amazon Bedrock AgentCore), owning it end to end from planning to execution across teams, so they could run reliably at scale, and built a web dashboard where teams inspect and validate the status of their agent runs.
- **Contribution Standards**: Authored the contribution standards that let several teams extend the shared tooling safely, with clear interfaces between components and room for teams to adapt defaults to their needs.
- **Technologies Used**: Claude Code (Agents, Skills, Plugins, MCP), Claude Agent SDK, Strands Agents, Amazon Bedrock AgentCore, TypeScript, Node.js, Python, GitHub Enterprise, Jira, Confluence, BDD, Spec-Driven Development

**Freelance Software Engineer & Tech Lead** Feb 2024 – Present
*Self-Employed* *Munich, Germany*

- **Cloud Architecture & Modernization**: Design and implementation of AWS-based software solutions (multi-account, serverless, containerized) with emphasis on scalability, resilience, and compliance.
- **Software Architecture & Development**: Delivery of software platforms, backend services, and full-stack applications in TypeScript, Elixir, Rust and Python, ensuring maintainable and testable architectures (DDD, TDD).
- **Team Enablement & Leadership**: Advisory on AWS strategy, DevOps integration, and engineering practices, complemented by team enablement through code reviews, workshops, and mentoring.
- **Business Alignment**: Bridging of product vision with engineering execution through process streamlining and guidance on sustainable technology strategy.
- **Technologies Used**: AWS (CDK, API Gateway, S3, DynamoDB, Lambda, EKS, ECS, Fargate), TypeScript, Node.js, Vitest, Hono.js, Cypress, Rust (Async/Tokio), Elixir, F#, GitHub, Claude, Terraform, Pulumi, Python, FastAPI

**Tech Lead (Freelance Contract)** Jan 2026 – Mar 2026

*For a Software Consultancy Client* *Remote, Germany*

- **Engineering Standards**: Raised the team's engineering maturity with clear standards and architectural guidance for a serverless, event-driven AWS system built on Lambda, API Gateway, EventBridge and DynamoDB, building stakeholder confidence through consistent results.
- **CI/CD & Quality Engineering**: Improved the CI/CD pipelines and introduced unit, integration and end-to-end testing with Pytest and Vitest, plus BDD specifications that gave Product and Development a shared language.
- **Team Practices**: Made code reviews, pair programming and knowledge sharing part of the team's routine, improving accountability and making progress more transparent and predictable.
- **Architecture & Delivery**: Owned the work end to end, from requirements analysis to infrastructure as code with Terraform and AWS CDK and deployment.
- **Technologies Used**: Python, TypeScript, Terraform, AWS (CDK, Lambda, API Gateway, DynamoDB, EventBridge), PostgreSQL, Pytest, Vitest, Next.js, Claude Code

**Lead Platform Engineer (Freelance Contract)** Nov 2024 – Aug 2025

*BetterDoc | Health Services Provider* *Remote, Germany*

- **Backup & Recovery**: Designed and rolled out a multi-account backup and recovery strategy with AWS Backup across AWS Organizations, with cross-region replication within Europe and Slack notifications.
- **Supply-Chain Security**: Automated software supply-chain security by generating a software bill of materials for every build in GitHub Actions, scanning it for vulnerabilities with Trivy and tracking the results centrally in Dependency-Track.
- **Event-Driven Systems**: Ran on-site workshops for team leads and wrote internal guidelines on event-driven systems, leading to consistent adoption across product teams.
- **Platform Modernization**: Defined the migration strategy to next-generation Amazon EKS clusters and helped rationalize more than 100 microservices, balancing team autonomy with operational efficiency.
- **Operations**: Defined patching workflows for EKS and EC2 workloads, and streamlined the Terraform codebase to reduce complexity and cost.
- **Technologies Used**: AWS (Organizations, Landing Zone, IAM Identity Center, Backup, Security Hub, S3, Lambda, RDS, EKS, ECR, SQS, SNS, Bedrock, Cost Optimization), Kubernetes, Helm, Docker, Terraform, PostgreSQL, Python, Elixir, GitHub Actions, Trivy, Dependency-Track, SBOM, Prometheus, Loki, Grafana, EventCatalog, Jira, Confluence

**Cloud Consultant (Freelance Contract, AWS CDK Focus)** Mar 2024 – Oct 2024

*SCHUFA | Credit Bureau* *Remote, Germany*

- **Cloud Modernization**: Migrated the infrastructure of a Java Spring Boot and React SaaS product from Terraform to AWS CDK in TypeScript.
- **Team Enablement**: Guided a team of four developers to take full ownership of the application lifecycle through CDK practices, code reviews and pair programming.
- **Architecture Advisory**: Supported Platform and Product teams in adopting AWS CDK and designing their infrastructure.
- **Application Migration**: Improved the maintainability and resilience of a TypeScript serverless application on AWS Lambda and API Gateway while extending it during a cross-account migration.
- **Technologies Used**: AWS (CDK, API Gateway, S3, Lambda, RDS, ECS, Fargate), TypeScript, Node.js, Terraform, PostgreSQL, OpenAPI, OAuth, GitHub, React, Java, Spring Boot, Jira, Confluence

**Lead Software Engineer** Aug 2022 – Jan 2024

*SEMA GmbH | CAD/CAM Software* *Wildpoldsried, Germany*

- Led the four-person engineering team behind SEMA's new Common Data Environment, a SaaS product for the timber construction industry, responsible for its technical direction and delivery.

- Owned the architecture of the Common Data Environment at SEMA, a CAD/CAM vendor serving more than 11,000 customers in over 60 countries, building core parts of it hands-on in TypeScript and Rust and facilitating the team's Scrum process.
- Worked closely with stakeholders and product owners to clarify and prioritize requirements, guiding the team towards pragmatic, high-quality solutions.
- Built an event-driven file processing pipeline on Amazon S3 events and AWS Lambda that automated file handling.
- Helped hire for technical and leadership roles, and grew the team's skills through pair programming sessions and AWS training.
- **Technologies Used**: AWS (CDK, API Gateway, S3, DynamoDB, Lambda, ECS, Fargate, Cost Optimization), TypeScript, Node.js, Rust (Async/Tokio), poem-openapi, OpenAPI, OAuth, BDD, Azure DevOps, SAFe

**Principal Engineer** Nov 2021 – Jul 2022

*PPRO* | *Payments Infrastructure* *Munich, Germany*

- Uplifted an established payments engineering organization by standardizing and streamlining its AWS practices, through company-wide training, governance and compliance reviews, and hands-on serverless delivery.
- Designed and delivered an AWS training program with the AWS Technical Account Manager, adopted across the engineering organization.
- Supported cloud governance and compliance reviews of the AWS environment, covering security, scalability and regulatory requirements.
- Implemented a multi-account AWS setup with AWS CDK and a GitLab CI/CD pipeline for reliable deployments.
- Delivered a serverless TypeScript backend on AWS Lambda, defined with AWS CDK, for a UK merchant's transaction portal.
- Helped hire cloud engineers and team leads, and advocated for serverless approaches in cross-team technical discussions.
- **Technologies Used**: AWS (CDK, API Gateway, Lambda, Kinesis, EKS, ECS, Fargate, CloudFormation), Serverless, TypeScript, JavaScript, Node.js, Cypress, Python, Docker, Terraform, Pulumi, Kubernetes, Helm, Elasticsearch/OpenSearch, GitLab, Okta, OAuth, Middy.js, Jira, Confluence

**Lead Cloud Consultant** Aug 2019 – Oct 2021

*tecRacer* | *AWS Consulting* *Munich, Germany*

- Delivered technical and strategic AWS consulting across industries in Germany and Austria, including projects with regulatory requirements, and supported pre-sales and hiring.
- Directed the migration of a device management platform to AWS for a German insurer, with an active-active multi-region setup on Amazon EC2 and Route 53 handling more than 300,000 simultaneous device connections.
- Led a database migration from Microsoft SQL Server to MySQL-compatible Amazon Aurora Serverless for a SAP Commerce platform serving the Japanese market, resolving Unicode and performance issues and improving monitoring with New Relic.
- Built a serverless application around a state machine architecture with AWS Step Functions, Lambda and DynamoDB, including PDF generation and email delivery.
- **Technologies Used**: AWS (CDK, API Gateway, Cloud Migration, Lambda, DynamoDB, Aurora, EKS, ECS, Fargate, CloudFormation, Cost Optimization), VMware, Microsoft SQL Server, Jenkins, TypeScript, JavaScript, Node.js, Python, Docker, Terraform, Kubernetes, Elasticsearch/OpenSearch, Jira, Confluence

**Senior DevOps Engineer** Jan 2018 – Jul 2019

*Commerce Connector, now Waywia* | *E-Commerce SaaS* *Stuttgart, Germany*

- Kept a global e-commerce SaaS platform reliable, secure and performant.
- Introduced Prometheus and Grafana for KPI monitoring and improved log management with Splunk.
- Supported Quality and Data Engineering teams with serverless and containerized infrastructure on AWS Lambda and Fargate.
- **Technologies Used**: AWS (Lambda, Fargate, EC2, RDS, S3, CloudFront), Serverless Framework, Prometheus, Grafana, Splunk, Docker, Python, Node.js

**AWS Cloud Engineer** Mar 2017 – Dec 2017

*Nuvme* | *Cloud Services* *Blumenau, Brazil*

- Led several migrations of web and ERP systems to AWS, moving workloads onto Amazon EC2 and RDS with Docker-based deployments.
- **Technologies Used**: AWS (EC2, S3, IAM, Route 53, RDS), Docker, Grafana, Elasticsearch, Linux (RHEL, Ubuntu), MySQL, Python

**Linux & Open Source Consultant** Jan 2014 – Mar 2017

*Indyxa Group (now Flowti)* | *IT Services* *Blumenau, Brazil*

- Consulted on infrastructure, monitoring and log management for mission-critical RHEL and CentOS environments, maintaining Nagios for monitoring and implementing Graylog with Elasticsearch for centralized logs, improving reliability and security.
- **Technologies Used**: Linux (RHEL, CentOS), Nagios, Graylog, Elasticsearch, VMware, Oracle DB, Python, Bash

**Linux Administration Instructor** May 2013 – Jun 2013
*Proway IT Training* *Blumenau, Brazil*

- Taught the Red Hat Linux administration course, covering system configuration and network services.
- **Technologies Used**: Red Hat Enterprise Linux 5 and 6

**IT Support Analyst** Aug 2012 – Jan 2014
*QuickSoft Sistemas de Informações | IT Services* *Blumenau, Brazil*

- Supported enterprise infrastructure on Linux and VMware, including data protection and automated backup monitoring with IBM Tivoli Storage Manager.
- **Technologies Used**: IBM TSM, Linux, VMware, Exchange Server

**IT Support Technician** Oct 2008 – Aug 2012
*Advance Solution | IT Services* *Blumenau, Brazil*

- Supported IT infrastructure for small and medium businesses, from Windows Server and Active Directory to networking.
- **Technologies Used**: Windows Server, Active Directory, Exchange, Hyper-V, Trend Micro

## Community

**Organizer, Elixir, Erlang & Gleam Munich Meetup** Aug 2024 – Present
*The meetup for everything related to Elixir, Erlang, Gleam and the BEAM in Munich.* *Munich, Germany*

**Organizer, FP Stammtisch Munich** Mar 2026 – Present
*A monthly, casual get-together for anyone interested in pragmatic functional programming.* *Munich, Germany*

## Talks

**Functional Domain Modeling with Gleam**
*Code BEAM Europe 2025, Berlin | Recording* *Nov 2025*
*Elixir, Erlang & Gleam Munich Meetup, Munich* *Feb 2025*

How Gleam's type system and pure functions make domain logic readable to the people who own it, while keeping the robustness of the BEAM.

**Running Elixir on AWS without Kubernetes**
*Elixir, Erlang & Gleam Munich Meetup, Munich | Recording* *Sep 2025*

Why Kubernetes can be overkill on AWS, and how to run BEAM applications on ECS Fargate with AWS CDK, so teams can own their infrastructure in an integrated, cost-effective and secure-by-default way.

## Education

**Universidade Regional de Blumenau** Blumenau, Brazil
*Computer Science Studies* *Jul 2015 – Jul 2016*

Left after the second semester to focus on self-paced learning.

**CEDUP Hermann Hering** Blumenau, Brazil
*Technician in Computer Hardware and Networking* *2007 – 2008*

## Certifications

**Claude Certified Architect - Foundations** Jul 2026 – Jul 2027
*Anthropic*

**AWS Certified Solutions Architect - Associate** May 2020 – May 2023
*Amazon Web Services*

**Red Hat Certified Engineer (RHEL 7)** Dec 2014 – Dec 2017
*Red Hat*

**Red Hat Certified System Administrator (RHEL 7)** Dec 2014 – Dec 2017
*Red Hat*

## Communication Skills

**Languages**: Portuguese (native), English (fluent), German (fluent)
